PLAYING GUITAR:

Things to remember:

(written for Right Handed players so please reverse for left handed playing)

- Sit comfortably on a chair (without arms) and don't lean back in your chair.
- Keep your thumb behind your fingers in the left hand.
- Use your fingertips to push next to the frets with your left hand.
- Keep your right hand thumb rested when you play with walking fingers.
- Try to project a good sound when you play!
- Focus on a goal each time you practice!

A little and often approach to playing is always better than a once a week practice!

Want to play your favourite songs? You can always have a look at ultimateguitar.com and try and find them! Make sure you transpose them using the transpose button so that you get a good playable selection of chords.

Usually if the song starts on a minor chord for example Dm, the transpose (move up or down) so the Dm becomes Am.

AND if the song starts on a major chord for example G, then transpose up or down until the G becomes a C.

This will usually give you very playable selection of chords! ©

Most songs are playable anyway if you hover over the chord, it reveals the shape! Happy Practicing!

Stay safe and well!

Chris Trueman
